

Patent GB-40009

DI- PEPTIDE

Dipeptide

Function:

Known to inhibit the enzyme of conversion, ACE (angiotensin-converting enzyme).

Characteristics:

Reducing the recruitment of new adipocytes and improving lymph-drainage.

Dipeptide mobilizes the water in tissues and drains it activating the lymph node circulation to prevent pigmented materials tend to concentrate in the lax tissue around the eyes.

Properties:

Improves lymphatic circulation, reduces capillary permeability and detoxifies skin.

Applications:

Eye care

Recommended Dosage:

1 %

*Improving
lymph-
drainage
of
under-eye
bags
and
tissue fluid
balance.*
