

Patent GB-40014

NONA- PEPTIDE

Nonapeptide

Function:

Competes against the natural ligand, α -MSH (α -melanocyte stimulating hormone), to block melanin synthesis.

Characteristics:

Nonapeptide, a biomimetic peptide, does not allow the hormone (α -MSH) to tell the melanocyte to produce melanin, thus preventing and lightening hyperpigmentation.

Properties:

Prevents the melanocytes from synthesizing abnormal amounts of melanin when the skin is exposed to sunshine.

Applications:

Sun-spot reducing
Face & Skin whitening

Recommended Dosage:

2-4 %
