

Patent GB-40012

PENTA- PEPTIDE

Palmitoyl- Pentapeptide

Function:

Highly stimulates the production of fibronectin (FN) and glucosaminoglycans (GAGs) that moisturize and support the dermal matrix.

Characteristics:

Palmitoyl Pentapeptide stimulates the development of new collagen, elastin, FN and GAGs.

Properties:

Increases skin thickness and improves the appearance of aging skin. Stimulates the production of collagen IV fibroblasts. More effect than vitamin C.

Applications:

Anti-aging products.

Recommended Dosage:

5 %

*Using
between
BOTOX®
injections
can bring
