

Patent GB-40006

RENEW PEPTIDE

Renew peptide 147

Function:

Inducing the regeneration of fibroblast, and reduce the appearance of wrinkles.

Characteristics:

Its biological activities mediated by inducing the TGF-beta 1 expression, which up regulate the matrix protein (collagen I, III, IV, and Fibronectin) expression in fibroblasts, and improving regularity of collagen IV at the dermal-epidermal junction.

Properties:

Improvement in wrinkles and other age-related complaints, age spots, and skin roughness, without the redness and other side effects associated with retinol-based products.

Applications:

Anti-wrinkles products
Smooth skin

Recommended Dosage:

5 %
