

Patent GB-40011

TETRA- PEPTIDE

Palmitoyl- Tetrapeptide

Function:

Markedly suppresses the secretion of cytokines (Interleukin 6), responsible for many of the signs of aging.

Characteristics:

Similar to DHEA, Palmitoyl Tetrapeptide can restore cytokine equilibrium, bringing more youthful skin.

Properties:

Delay the effects of premature aging.
Improves elasticity and firmness.
Hydrates, protects and smoothes skin.

Applications:

Skin care
Eye care

Recommended Dosage:

3 %

DHEA

like

for a

more

firmly in

face and

neck.
